SUMMARY

Full-stack developer and Informatics graduate (GPA 3.82/4.00) working with Laravel, Vue, React, NestJS, and TypeScript. Builds and maintains production products: EXSAO (school exam platform), SENCURA (curriculum administration), Kaasir (point of sale), Kiyura (Robux top-up store), and SwiftMu Tools (SketchUp plugin), covering backend, frontend, deployment, payment integration, and user support.

EXPERIENCE

FANDIKA (EXSAO, SENCURA & Kaasir) **Lamongan, East Java**
Founder & Full-Stack Developer Feb 2026 - Present

EXSAO, online exam platform for schools (Laravel, Vue, Inertia.js, MySQL)

- Started as the exam system for KKMI Kemenag Surabaya's 11-school joint tryout; now rented to schools monthly. One VPS and database per school, provisioned automatically after payment (usually 10-20 minutes). Servers pull updates via cron, postponed while an exam is running, with a database dump before each migration.
- After each exam, a rule-based suggestion engine flags suspect answer keys, misconceptions, and confusing questions, and proposes group remedial tests. Also built item analysis (difficulty, discrimination, distractors, KR-20), answer key challenges with score recalculation, Word/PDF question import, and multi-school joint tryouts with a combined ranking.
- Built Lexa, a Claude API assistant that drafts questions, test blueprints, and explanations, checks answer keys, and grades essays for teacher review, billed per use from prepaid credits.
- Exam clients: Tauri desktop app and Capacitor Android app with kiosk mode and screenshot blocking. Added 30-second rotating QR attendance, QR-verifiable exam documents, and local answer recovery when the connection drops. 109 Playwright E2E tests.
- Load-tested with k6 to set the student limit for each server plan; one server has handled 600 students in a single exam in production.

SENCURA, curriculum administration for schools (Laravel, Vue, MySQL) *Oct 2026 - Present*

- Turned the freelance madrasah project into a product: yearly and semester plans from the school calendar with Kemendikdasmen and Kemenag templates, grade book, report cards, attendance, teacher supervision, and parent updates via WhatsApp or Telegram. Teachers can keep working offline. Paired with EXSAO: master data flows to EXSAO and exam scores flow back.

Kaasir, point of sale for shops and restaurants (Tauri, React, Express, SQLite, Flutter) *Jul 2026 - Present*

- Sold with license activation. Features: shift cash reports, customer credit, returns, delivery notes, price quotes, kitchen display, table reservations, prepaid mobile and electricity top-ups, and expiry-based stock. Sales run on a local SQLite database without internet; a Flutter owner app pairs with the cashier PC for reports.
- When a beta tester's 8,000-product store lagged, virtualized the POS, catalog, inventory, and history lists and moved large local data from localStorage (5 MB cap) to IndexedDB.

Admin panel for EXSAO, SENCURA & Kaasir (Laravel, Filament) *Sep 2026 - Present*

- Merged separate admin services into one Filament app handling orders, invoices, payments, licenses, app releases, bug reports, and school server monitoring. Moved payments from Midtrans to Mayar without losing unpaid invoices.

Kiyura Top Up, Robux top-up store (kiyura.my.id) **Lamongan, East Java**
Co-founder & Full-Stack Developer Oct 2026 - Present

- Built the store on one Cloudflare Worker (Hono, D1, R2) serving the API and a React storefront, deployed by GitHub Actions. Validates the buyer's Roblox gamepass before payment (Mayar) and shows queue position and delivery estimates.
- Telegram bot for order queue, stock updates, and reminders for orders pending over an hour. Stock is deducted in a single transaction and returned when payment fails. Added reviews, FAQ pages with structured data, email notifications (Resend), and a monthly leaderboard.

SwiftMu Tools, SketchUp plugin (swiftmu.my.id) **Serang, Banten**
Co-founder & Full-Stack Developer Sep 2026 - Present

- Paid plugin with 20+ modeling tools for architects (7-day trial, QRIS license). Built the in-app updater (SHA-256 integrity check, partial download guard), the tool hub, and the Replacer, Clean Group, Reset Scale, and Hide on Scene tools in Ruby.
- Built the landing page (Vue, Vite, Cloudflare Workers) that rebuilds on each plugin release and pulls the tool list and release notes from the plugin repository.

Teacher Profile & Madrasah Administration Platform (halopakaziz.com) **Surabaya, East Java**
Freelance Full-Stack Developer May 2026 - Sep 2026

- Built a teacher profile site and admin system (NestJS, Prisma, PostgreSQL, Nuxt): teaching plans from the school calendar, grade book with offline input queue, report cards, QR attendance, and WhatsApp/Telegram notifications for parents. Later developed into SENCURA.

EDUCATION

UNIVERSITAS PEMBANGUNAN NASIONAL "VETERAN" JAWA TIMUR **Aug 2021 - Apr 2026**
Bachelor of Informatics (GPA: 3.82 / 4.00)
Thesis: Adaptive Attendance System using face recognition (MTCNN & FaceNet)

- Built a desktop attendance app that rejects blurry, tilted, or off-center face photos before matching.

SKILLS & CERTIFICATION

Backend: PHP, Laravel, Filament, NestJS, Node.js/Express, Hono, Python, Flask, Ruby (SketchUp API). **Data:** MySQL, PostgreSQL, SQLite, Cloudflare D1, Prisma, Redis
Frontend: TypeScript, Vue, Nuxt, Inertia.js, React, Pinia. **Desktop & Mobile:** Tauri (Rust), Capacitor, Flutter/Dart
Infra & Testing: Cloudflare Workers, R2 & Access, Docker, Nginx, Caddy, Ubuntu VPS, GitHub Actions, Playwright, Vitest, Pest, k6
Integrations: Midtrans, Mayar, Claude API, Telegram Bot API, Resend
Languages: Indonesian (native), English (intermediate). **Certification:** Junior Web Programmer BNSP (2025)
